**Drink DJ**

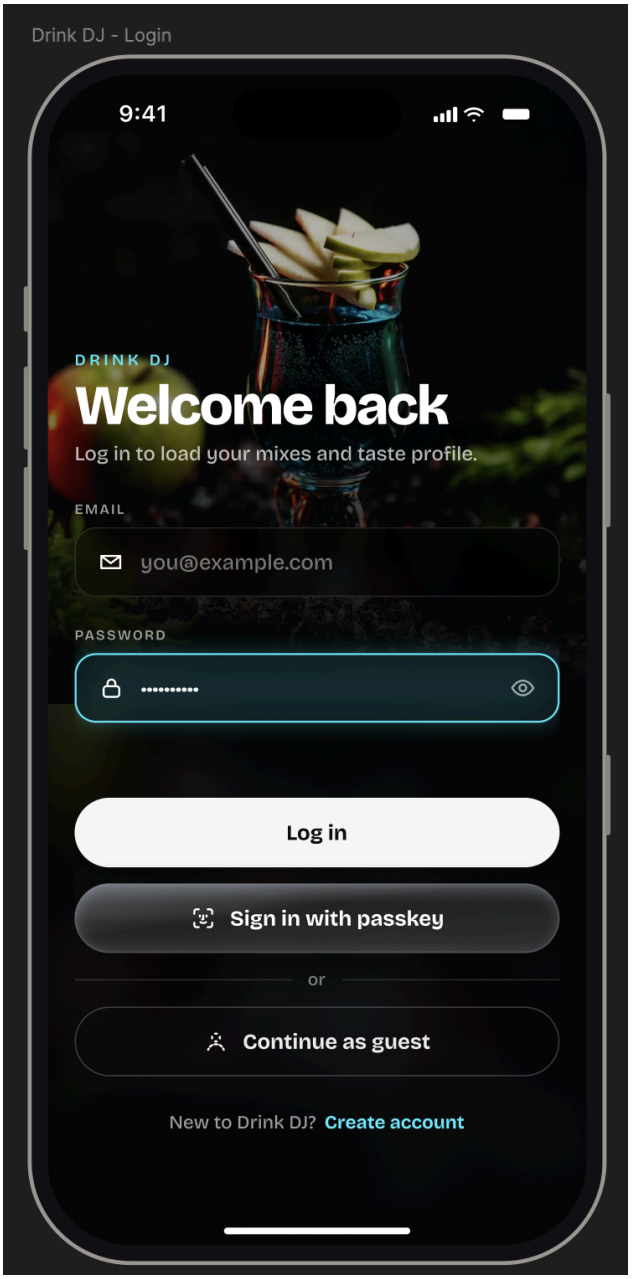

https://www.figma.com/design/HiV40S85NZ1liHj2CrELIY/Main-Screens?node-id=0-1&t=rz4Q8PM5rEg1WVNm-1

**Registration Screen**

The user can create a new account, by inserting a unique name, unique email and password. On a screen there is information about whether insterd password is a strong one. User can navigate from the Registration Screen to the login one, or just

continue, as a guest. Guest can only view playlists and drinks created by other people. User can also navigate to the Login Screen, by clicking on “Log in” button.

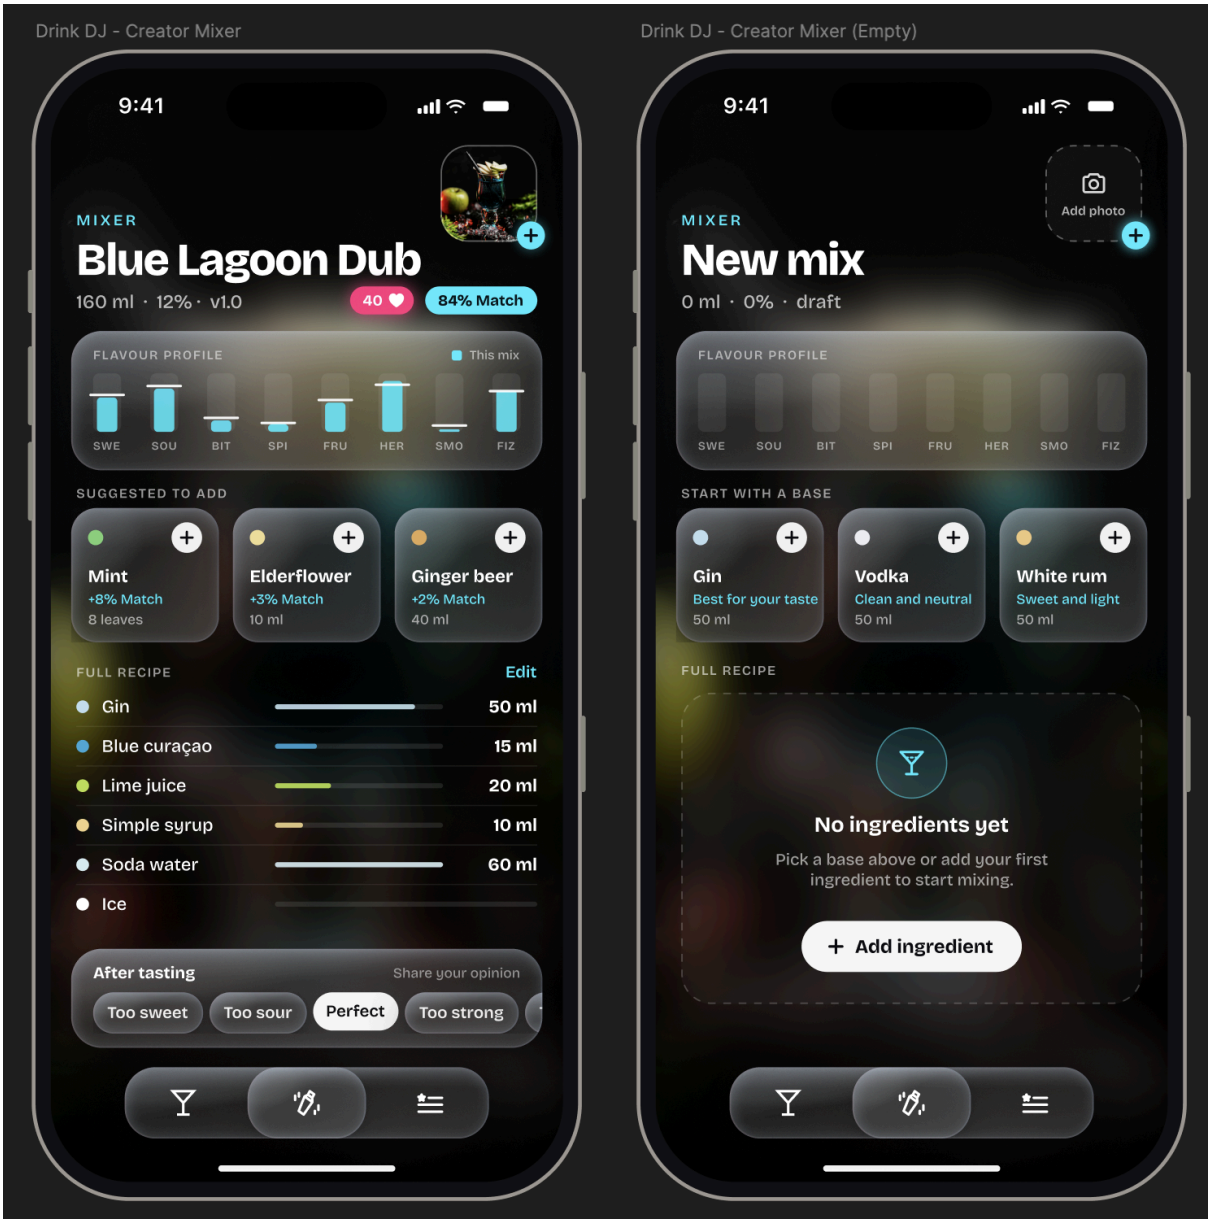

**Login Screen**

The user signs in with email and password, or with a passkey by including FaceID. After successful login, the user is redirected to the Library Search Screen. Only user that does have an account can login into the application. In case the user provided incorrect data, it will be informed about it, with an error message. The user can also continue, as a guest as in the Registration Screen case. It also can navigate to the Registration Screen, by clicking on the “Create account” button.

**Preferences Screen**

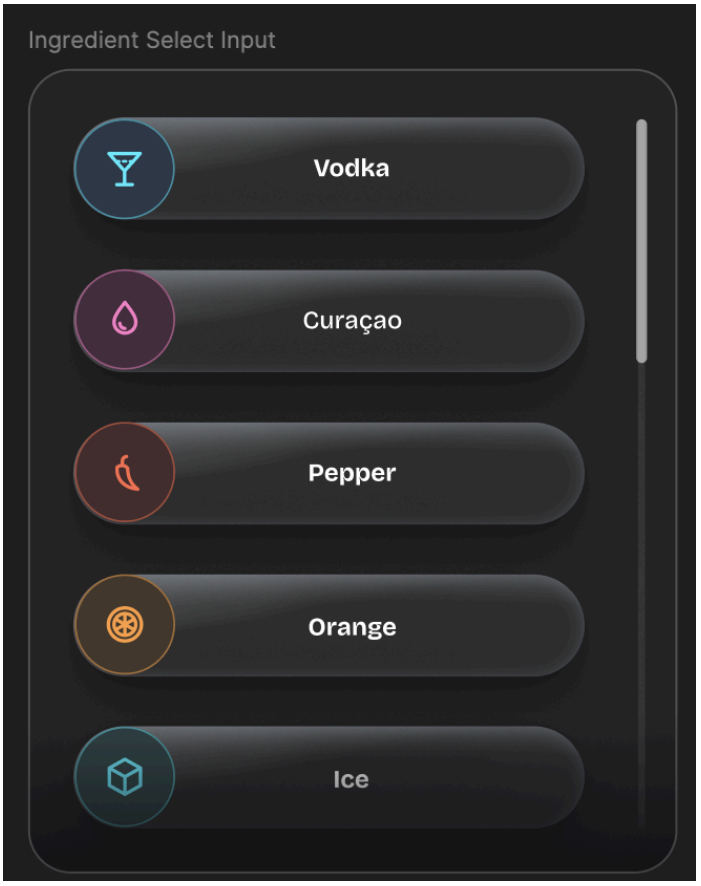

The user in this screen can modify its own preferences, by changing the value of the range type inputs. Those inputs are customly designed as a rotary knob, similarly on the ones on a DJ console. The user can also mark which types of ingredients he likes. The user can move to this screen, by clicking the Console button inside the Profile Screen. Preferences set in this section, will be later processed by drinking creator algorithm and can be used, for better adjustment of the drinks user will be exposed to in the LIbrary Search Screen.

**Drink Mixer Screen**

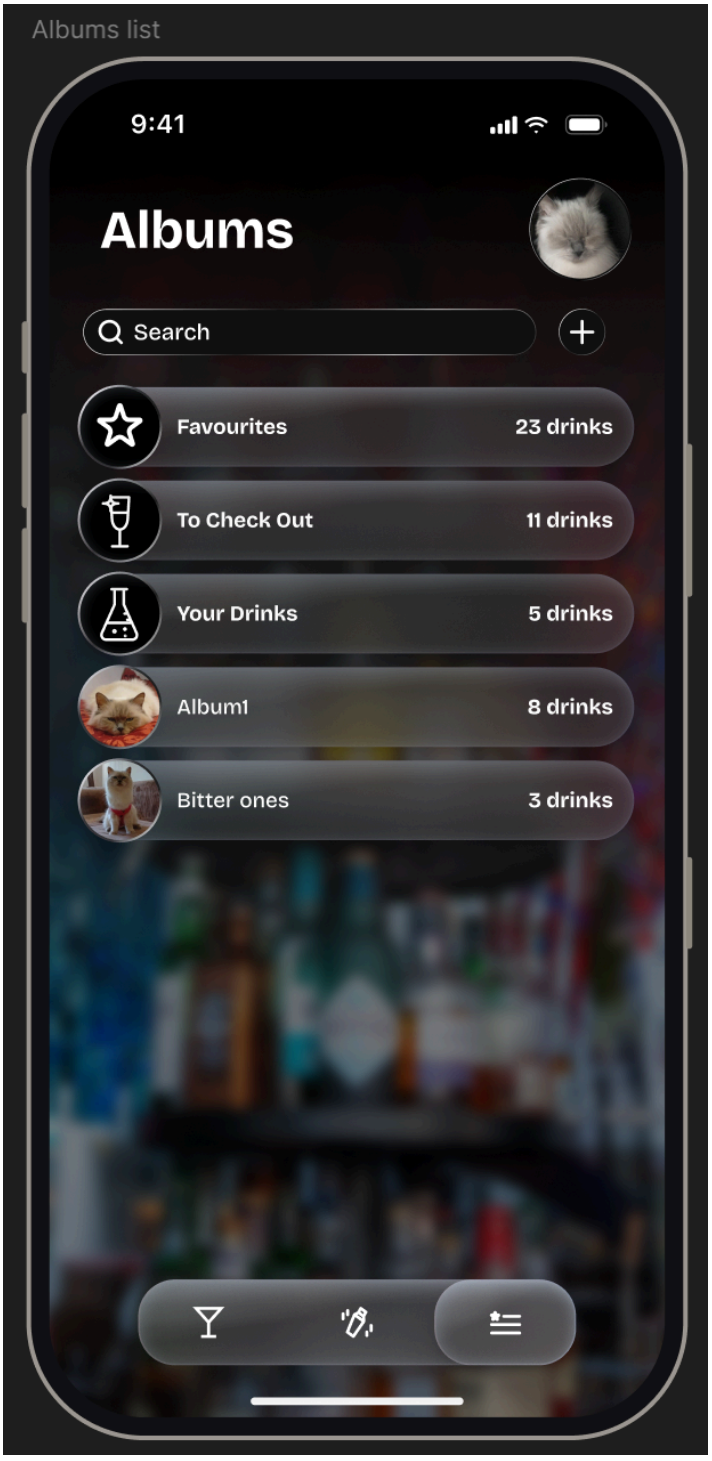

The user can enter this screen in various ways. First one is to just click Drink Mixer Icon in the navigation bar at the bottom of the screen. After that user is redirected to the screen on the right. The user can create a new version of the drink. Name of the drink can be changed, by double clicking, changing the name value and clicking enter key. New ingredients and and base of the drink can be added, by clicking the “+” icon next to them. The user can also upload the photo, which will be visible beside the drink name in the Library Search Screen.

The most important feature of the Drink Mixer is that ingredients for a drink are dynamically calculated and suggested to the user based on its preferences and opinions about the drink. It would be done by the implementation of some specialistic algorithm. Created drinks have information about the current flavour distribution, calculated based on different ingredient = attributes. Each drink also has information about its volume, alcohol percentage and current version.

Ingredients can be picked from the **Ingredient Select Input** above. It shows after clicking Add Ingredient button.

Second way of reaching the Drink Mixer Screen is by selecting your previously created drink in the Library Screen in Your Drinks Album. After that user will be redirected to the screen similar to the one on the top right part of this section. The last way of being redirected to the Drink Mixer Screen is by clicking on the drink that does not belong to you, anywhere in the application. In this scenario the user will be redirected to the Drink Mixer Screen and can modify the recipe in the other person's drink. However this modification will only be saved locally, so users will create a local copy of the other person's drink with increased version number and changed recipe.

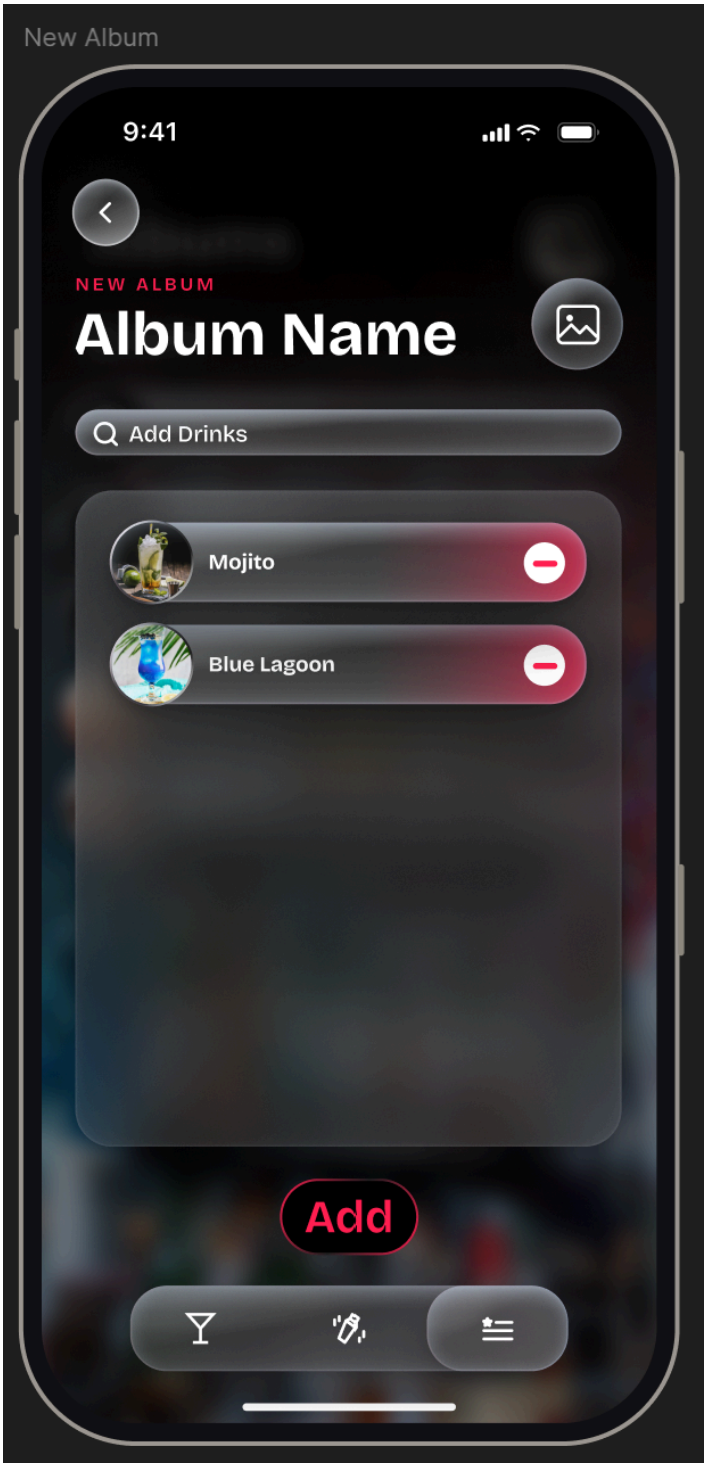

**Albums List Screen**

The user can enter this screen by clicking the lists icon in the navigation bar at the bottom of the screen. The Screen always shows albums: Favourites, To Check Out, Your Drinks. It also shows any albums that user has previously created. Each Album has its icon (default one if not selected) and it shows how many drink it contains. The screen also allows to search for specific albums in our collection.

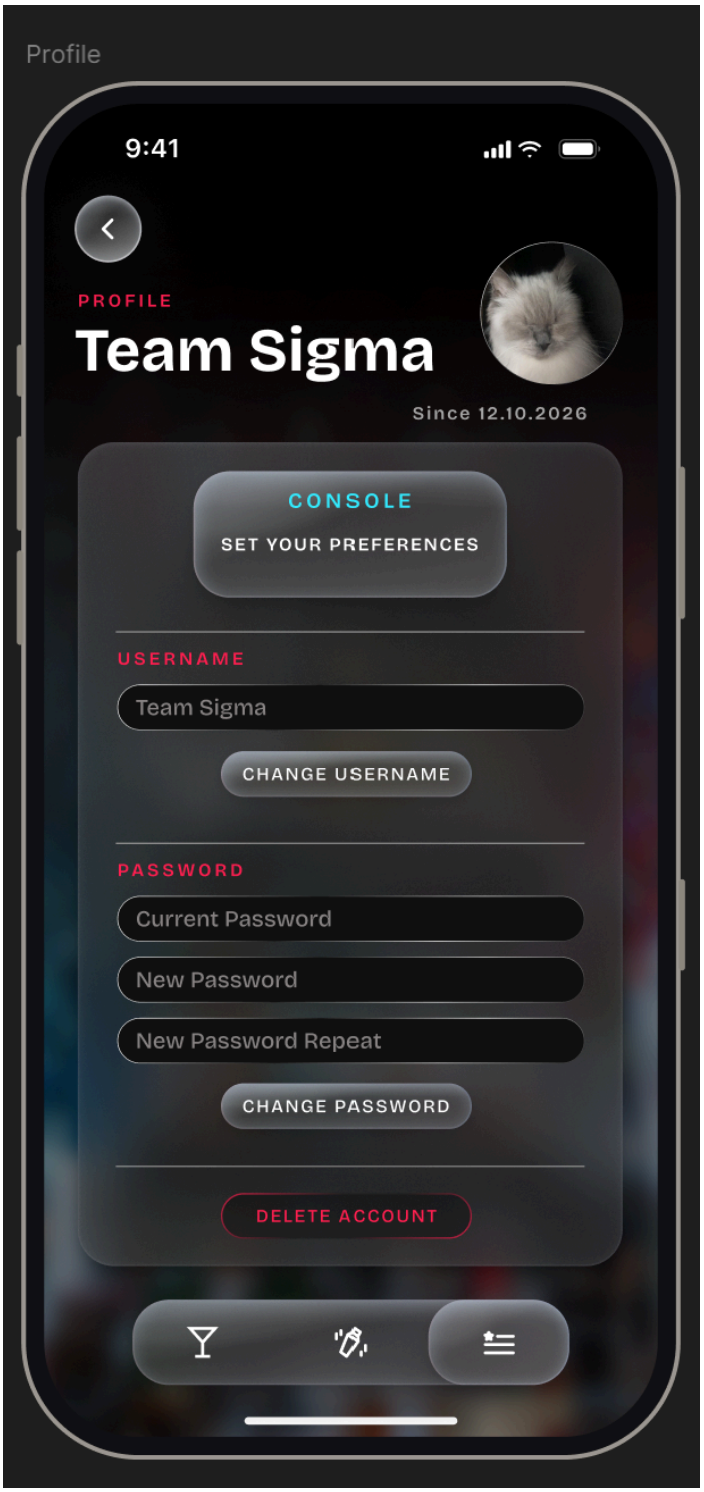

**Album Screen**

The user can enter this screen by clicking any album at the Albums List Screen. The Screen show the changeable name and icon of the Album, and also displays the total number of drinks contained. It allows to add new drinks by searching for them in the “Add drinks” field. It also shows all of the drinks contained.

**New Album Screen**

The user can enter this screen by clicking the “+” button on the Albums List Screen. It features changeable Album name and icon. The user can also search for drinks and add them to the new album. All drinks added this way will appear on the list, and can be removed by clicking the red “-” button on them. After clicking the “Add” button at the bottom, a new album will be created with the selected name, icon and it will all the selected drinks.

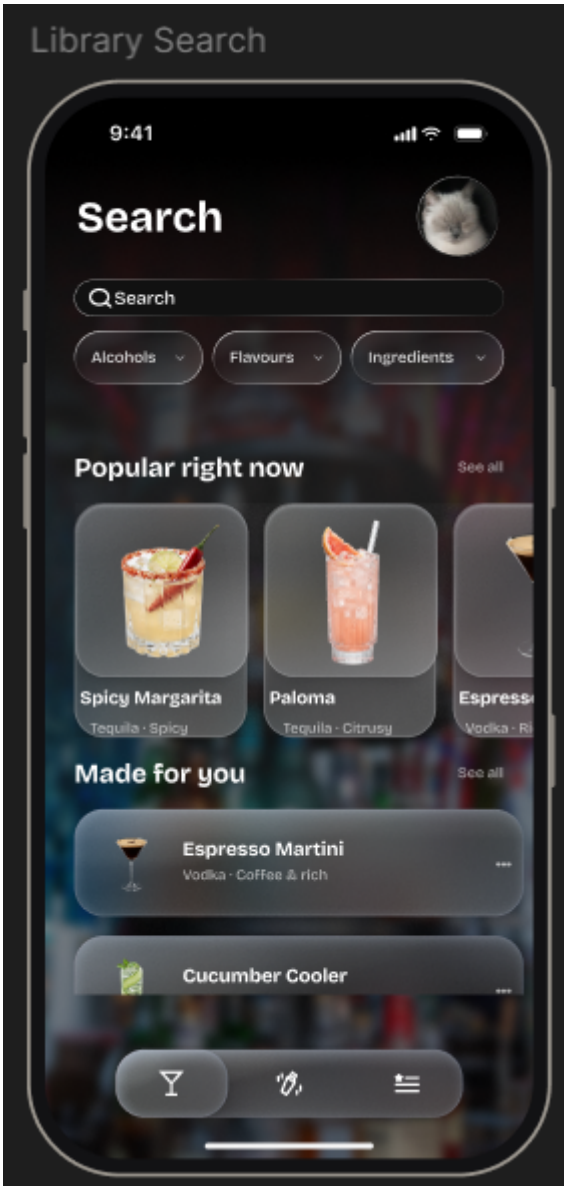

**Profile Screen**

The user can enter this screen by clicking their profile picture on the Albums List Screen. It shows users username, date of account creation and a changeable profile picture. It also features the “console” button taking the user to the Preferences Screen. User can also change their username (by typing the new username in

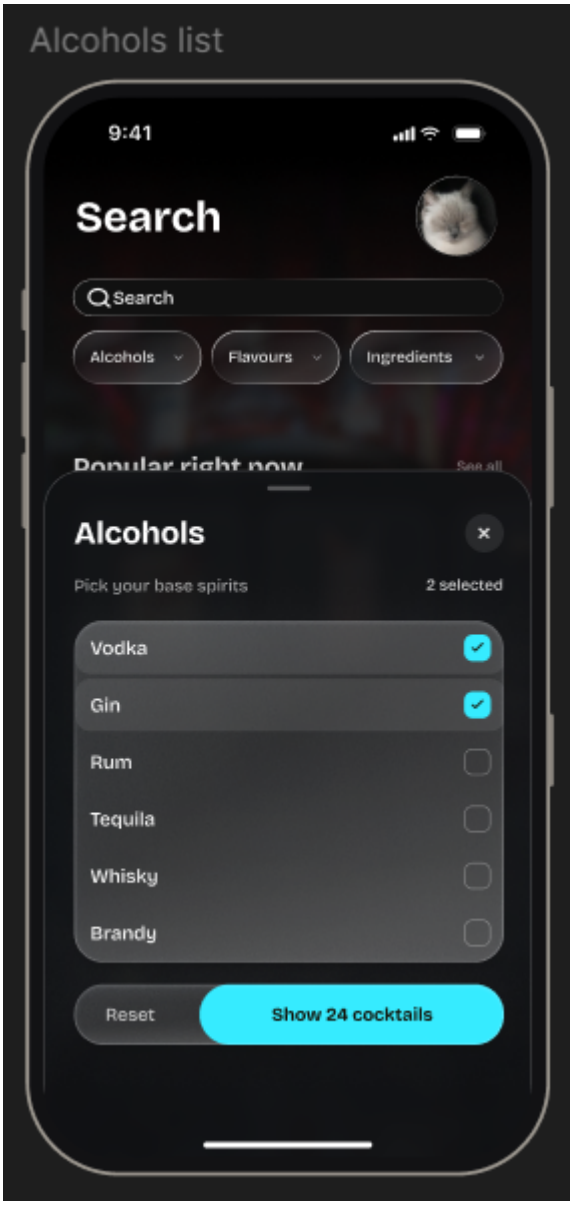

“username” field and clicking “change username”) and password (by typing the correct current password in “Current Password” field, identical passwords in “New Password” and “New Password Repeat” fields and clicking “change username”). Finally, the user can delete their account by clicking the delete account button.

**Library Search**

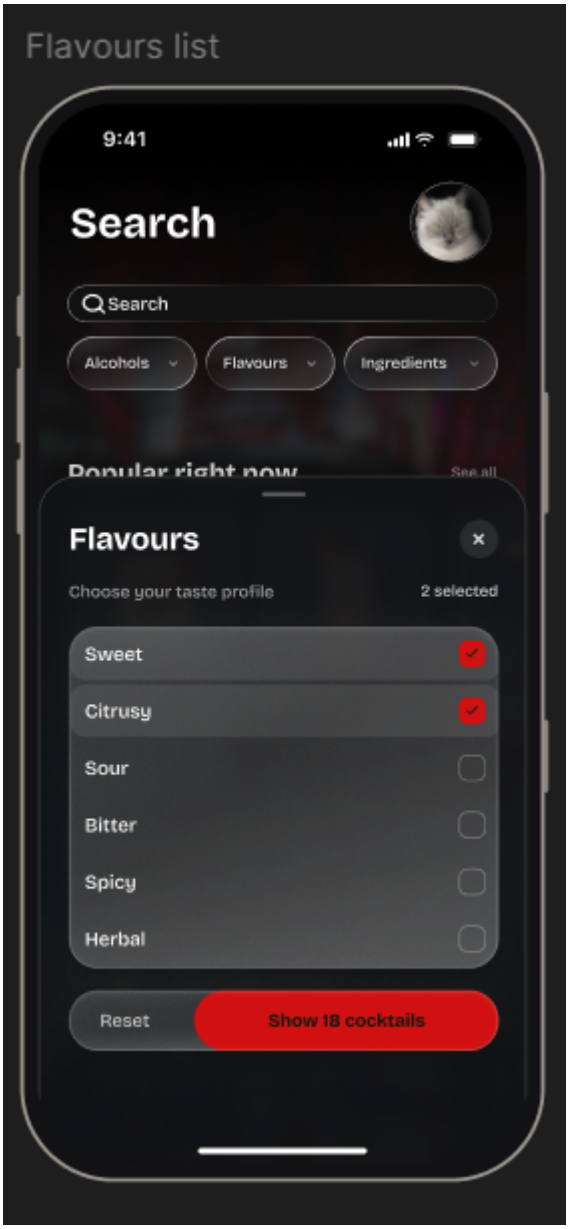

The user can use this screen to browse cocktails and search for a specific drink by typing in the “Search” field. The “Alcohols”, “Flavours” and “Ingredients” buttons open lists where the user can select filters. The “Popular right now” section displays popular cocktails, while the “Made for you” section presents personalised suggestions. Each cocktail card shows the drink’s name, image and a short description. The user can click “See all” to view more popular cocktails or click their profile picture to open the Profile Screen.

### Alcohols list

The user can open this panel by clicking the “Alcohols” button on the Library Search Screen. It allows the user to filter cocktails by selecting one or more base spirits, including vodka, gin, rum, tequila, whisky and brandy. Selected spirits are marked with a checkbox, and the number of selected options appears above the list. The user can clear their selections by clicking “Reset” or apply them by clicking “Show 24 cocktails”, which displays the number of matching cocktails. Clicking the “×” button closes the panel.

### Flavours list

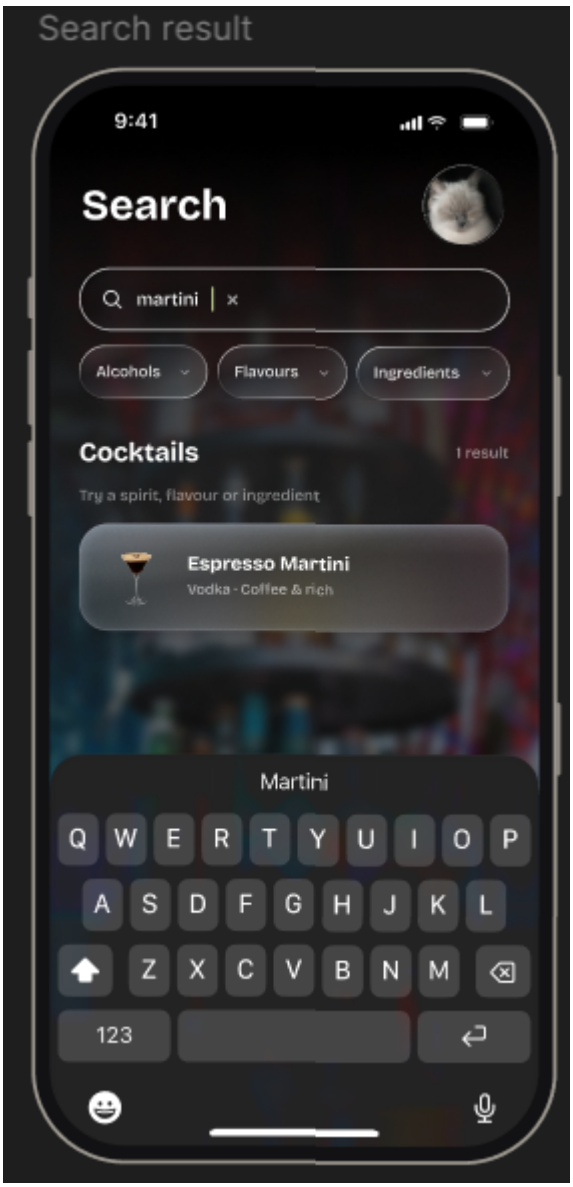

The user can open this panel by clicking the “Flavours” button on the Library Search Screen. It allows the user to choose their preferred taste profiles from sweet, citrusy, sour, bitter, spicy and herbal. The user can select multiple flavours, with checkboxes indicating their choices and a counter showing the number selected. Clicking “Reset” clears the selections, while clicking “Show 18 cocktails” applies the filters and displays matching cocktails. The user can close the panel by clicking the “×” button.

**Ingredients list**

The user can open this panel by clicking the “Ingredients” button on the Library Search Screen. It allows the user to filter cocktails by ingredients, including lime, mint, lemon, orange, sugar syrup and soda water. The user can select multiple ingredients by clicking their corresponding checkboxes. The number of selected ingredients appears above the list. Clicking “Reset” clears the selections, while clicking “Show 12 cocktails” applies them and displays matching cocktails. Clicking the “×” button closes the panel.

**Search result**

This screen displays cocktails matching the text entered in the “Search” field. The user can type a cocktail name, spirit, flavour or ingredient, and the number of results appears next to the “Cocktails” heading. Each result shows the cocktail’s image, name and a short description. In the example, searching for “martini” returns one result: Espresso Martini. The user can clear the search by clicking the “×” inside the search field or narrow the results using the “Alcohols”, “Flavours” and “Ingredients” filters.
